SENIOR C/C++ DEVELOPER

Linux System Programming | Low Latency Systems | Multithreading | IPC | TCP/IP |
Performance Optimization

PROFESSIONAL SUMMARY

Senior C/C++ Developer with 9.9 years of experience in developing high-performance and low-latency Linux-based applications across Payroll, Financial Transaction Processing, Gaming, and Enterprise Server Management domains.

Strong expertise in System Programming, Multithreading, Socket Programming, IPC mechanisms, TCP/IP networking, and Backend Performance Optimization. Experienced in building scalable backend systems, debugging production-critical issues, optimizing transaction processing, and improving application reliability.

Hands-on experience with Concurrent Programming, Linux Internals, Shell Scripting, CI/CD automation, and large-scale transaction processing systems.

TECHNICAL SKILLS

Languages

C, C++, STL, SQL, Shell Scripting, Python

Core Skills

- Linux System Programming
- Low Latency Systems
- Multithreading & Concurrency
- IPC & Socket Programming
- TCP/IP Networking
- Memory Optimization
- Concurrent Programming
- Performance Optimization
- Debugging & Troubleshooting

Tools & Technologies

GDB, Jenkins, SonarQube, Git, Kafka, Jira, PostgreSQL

Operating Systems

Linux, Ubuntu, RedHat, Solaris, AIX

PROFESSIONAL EXPERIENCE

Cast and Crew

Senior Software Engineer | Oct 2024 – Apr 2026

- Developed high-performance backend payroll processing modules using C/C++ on Linux.
- Worked on low-latency payroll calculation and transaction processing workflows.
- Optimized backend processing and improved application response time.
- Implemented complex business logic based on payroll contracts and compensation rules.
- Debugged and resolved critical production issues.

Tech Stack: C, C++, PostgreSQL, Linux

UST Global

Lead Software Engineer | Sep 2023 – Sep 2024

Project: Dell iDRAC

- Developed Linux-based system modules for remote server management.
- Worked on debugging, feature enhancements, and system stability improvements.

Tech Stack: C, C++, Python, Linux

Scientific Games

Senior Software Engineer | Jul 2019 – Jun 2023

Project: AEGIS Transaction Engine

- Developed transaction processing modules for gaming systems.
- Implemented new features, optimized performance, and resolved production issues.
- Participated in Ubuntu 20.04 migration activities.

Tech Stack: C, C++, Linux, Shell Scripting

CGI

Software Engineer | Jun 2016 – Jul 2019

Project: HotScan

- Worked on high-volume and low-latency financial transaction screening systems.
- Optimized backend transaction processing and SQL query performance.
- Improved indexing strategies and parallel processing efficiency.
- Enhanced report generation and data archival performance.
- Automated CI/CD pipelines using Jenkins and Make files.

Tech Stack: C, C++, SQL, Jenkins, Linux

EDUCATION

B. Tech – Electronics & Communication Engineering

Anasuyadevi Institute of Technology and Science | 2013
